

AARADHYA BHATIYA

Software Developer

Indore, India | +91 73899 77836 | bhatiyaaradhya@gmail.com | [linkedin.com/in/aaradhya-bhatiya](https://www.linkedin.com/in/aaradhya-bhatiya) | github.com/Arikiver | [Portfolio](#)

SUMMARY

Software developer with production experience across mobile and web applications, working in C#, C/C++, Java, Python and JavaScript. Most recently took over and independently ran the entire client-side development of a production lifestyle application after the other developers on that side departed, owning feature implementation, cross-platform native integration, interop protocol design and release-blocking debugging. Final-year Computer Science student graduating 2026, comfortable moving between languages and technology stacks.

TECHNICAL SKILLS

Languages: C#, C, C++, Java, Python, JavaScript, SQL, HLSL, GML, HTML/CSS

Engineering: Object-oriented design, data-driven architecture, REST and GraphQL API integration, real-time state synchronisation, native interop (Objective-C, Java/JNI), performance profiling, debugging, test design and regression testing

Tools: Git/GitHub, Unity 3D, PyQt6, Android and iOS build pipelines, OpenGL 3.3, WebGL, SDK integration, Blender, Figma, JIRA, Asana

PROFESSIONAL EXPERIENCE

Unity Developer | Boop | Remote

Jun 2026 - Sep 2026

- Assumed sole responsibility for the Unity client of a production lifestyle application after the other Unity developers departed, independently owning all client-side development through to a near-release build.
- Designed and documented the bi-directional message contract between the Unity runtime and the React Native host, adding an acknowledgement protocol that made a silently-failing interop layer diagnosable and a two-phase handshake that removed a startup deadlock between the runtimes.
- Developed native platform plugins in Objective-C (iOS) and Java/JNI (Android) to reach device capabilities unavailable to the engine, with tiered degradation across hardware capability levels.
- Built a data-driven architecture in which application behaviour is defined as editable configuration and interpreted at runtime, allowing new features to be authored without code changes.
- Diagnosed a cross-runtime performance issue through on-device CPU and GPU profiling, establishing the engine consumed 6-11 ms against a 33 ms frame budget and redirecting investigation to main-thread contention.

Lead Developer | TONIZTOZ | Remote

Mar 2025 - Present

- Lead developer on a five-person cross-disciplinary team, owning technical direction and project architecture from specification through active development.
- Architected core systems end-to-end including the animation pipeline and player class architecture, and wrote custom GPU shader programs in HLSL.
- Maintained technical documentation, managed delivery timelines, and mentored junior developers on code structure and workflows.

Unity Developer Intern | Pythrust Technologies | Gurugram, India

Oct 2025 - Jan 2026

- Delivered 17+ complete interactive modules from scratch within a live consumer product as part of a five-person team, implementing real-time multiplayer, UI and audio systems end-to-end.
- Integrated the IronSource ad mediation SDK alongside analytics and backend services into a live production title.
- Wrote and maintained test cases, ran cross-device regression testing, and tracked tasks and deadlines through Asana.

Independent Developer (Contract) | Remote

2024 - Present

- Built and shipped four real-time casino applications with backend API integration, live wallet systems, balance synchronisation, currency switching, and mathematical probability and RTP models.
- Delivered 15+ AR applications including real-time tracking systems and indoor navigation built on 3D spatial scans, across desktop and mobile.

SELECTED PROJECTS

AssistSense - Python Desktop Automation System

Oct 2025 - Dec 2025

- Built the complete macro engine for a PC automation tool in a two-person team: an input recorder capturing timed mouse and keyboard events, a playback engine supporting conditional IF/ELIF/ELSE execution, and a versioned JSON schema with screen-normalised coordinates.
- Delivered the working automation path end-to-end: a wake-word voice listener with threaded capture and ambient-noise calibration, a multi-modal trigger dispatcher, and the PyQt6 management interface; designed the dispatcher to degrade gracefully so the application stayed usable when optional detection engines failed to initialise.

Chalo Yaar! - 3D Multiplayer Survival Application

Jan 2026 - May 2026

- Resolved critical performance bottlenecks using the Unity Profiler, reducing draw call batches from 130,000+ to under 30,000 and raising sustained framerate from 15 fps to 50+ fps; built a modular multiplayer architecture on Unity Netcode for GameObjects.

Questify - Gamified Task Manager

Jul 2024 - Nov 2024

- Built a task manager in C# integrating a GraphQL API and GitHub activity tracking to verify real user productivity.

EDUCATION

B.Tech Computer Science and Engineering (spz. Gaming and Graphics) | UPES, Dehradun | CGPA 7.78

2022 - 2026

Relevant coursework: Data Structures and Algorithms, Operating Systems, Computer Networks, Object-Oriented Programming, Software Engineering, Computer Graphics, Android Development.
